

How to use cable ties

Cable ties are designed to be used only once. Before you tighten them make sure they are positioned where you want them.

- Wrap the cable tie around the item you are securing and through one hole in the mouseArm.
- Place the point of the tie through the underside or flat side (arrow) of the other end.
- Move the arm into position and the buckle of the cable tie under the item you are securing.
- Tighten the tie.

**** Please note, cable ties are not intended for securing heavy duty items! ****
